# ABOUT EV CARGO

**EV Cargo is a global supply chain and logistics execution platform providing air and sea freight, road freight and contract logistics, along with associated technology services. We offer unique mission-critical, supply chain solutions to more than 10,000 customers across the retail, consumer and industrial sectors.**

EV Cargo provides a comprehensive range of international air and sea freight services, including innovative multimodal solutions connecting manufacturers and retailers worldwide to power the global economy.

Our regional air hubs in London, Amsterdam, Dubai, Singapore and Hong Kong underpin our global network and service proposition, allowing us to move over 90,000 tonnes of cargo a year by air, underpinned by our strategic relationships with the world's leading airlines.

EV Cargo has unrivalled experience and subject matter expertise in several key high-value specialist verticals delivering relentless service reliability in complex and time-critical operating environments.

# OUR SECTOR EXPERTISE

**EV Cargo is widely recognised as a leader in supply chain management for the global aerospace industry.**

Our aerospace industry experts understand every aspect of this highly complex and time-critical operating environment where service reliability is paramount.

**24/7 Service:** We operate round the clock and seven days a week to ensure the highest level of service flexibility and agility to minimise your aircraft on the ground time.

**Experienced Team:** Our specialist aerospace team features EASA 145 and FAA trained staff, airside ramp experience, and is an expert in the complex customs clearance of aerospace shipments.

**Specialist Handling:** Our aerospace compliant storage solutions provide total logistics support for all aircraft parts and include a wide range of inventory management features including asset tracking with batch and serial number control.

**Global Network:** Our regional hubs in Amsterdam, London, Dubai and Singapore, combined with our dedicated fleets with airside access and approved partner road carriers in Europe, give you access to a highly effective integrated global aerospace network capability.

# CASE STUDY

Assigned the task of transporting a CFM56-5B engine from Ireland to Pakistan, our team coordinated the process meticulously.

The engine commenced its journey via road freight to our London air freight hub, where our dedicated in-house customs team managed all documentation, including customs declarations. Subsequently, the engine transitioned seamlessly to the airline handling agent at Heathrow airport for onward transportation to Pakistan.

EV Cargo's adeptness in time-critical logistics ensures reliable and smooth operations, confirming our position as trusted partners in the aerospace industry and ensuring the seamless movement of critical components across global supply chains.

# WHY LEADING BRANDS TRUST US

**Leading manufacturers and brands entrust us to fulfil and deliver their orders, 365 days a year.**

The strength of our global integrated logistics execution platform comes from the team of world class experts we have assembled, the proprietary technology stack that we've built and the decades of consistent high quality service we have provided to our loyal customer base.

Our services range from global product distribution to a fully managed service incorporating warehousing, inbound import, order picking, distribution and returns – all underpinned by our market-leading technology to provide full consignment visibility:

- Air, sea and road import services with 150 operating centres worldwide.
- 3 million sq ft of UK warehousing catering for a range of solutions.
- UK wide FTL/LTL/pallet and eCommerce final mile distribution.
- Expert, cost-effective international export with full customs management.

# SUSTAINABILITY IN ACTION

**Our customers rely on us to help reduce the environmental impact of their distribution operations, decarbonise their supply chains and help them meet net zero and ESG targets.**

As a company committed to sustainability, we are working with stakeholders to positively contribute to the global sustainability agenda.

We pioneered the introduction of HVO fuel, an alternative to traditional diesel that delivers 90% reductions in CO2 emissions, to help Budweiser Brewing Group and AB InBev reduce its carbon footprint and drive its ambition to reach net zero at UK breweries by 2026. We have an established network of HVO-fuelled trucks that have been introduced to a number of key clients' logistics operations across the beverage sector.

In partnership with The Park, which supplies 25% of all wine sold in the UK, we launched the UK FMCG industry's first all-electric, zero-emissions HGV as part of a significant sustainability partnership.

## EV CARGO AT A GLANCE

We operate in 27 countries  
across the globe

We operate from over 90  
different locations

Over 2,900 employees  
worldwide

## OUR CAPABILITIES

We move 270,000  
TEU of sea freight  
annually

We move 70,000  
tons of air freight  
annually

We move 4.2 million  
LTL pallets  
annually

We move 500,000  
FTL loads  
annually

We manage  
3.9 million orders  
annually

We connect 20,000  
supply chain  
professionals

We connect 6,000  
factories worldwide  
through ONE EV Cargo

We connect 3,000  
truck drivers  
through ONE EV Cargo

We manage \$60m of  
gross merchandise  
value annually

We manage  
1.1 million SKUs  
annually
